

Security Management

Title: Why does the World Need Proactive Security Managers?

Computer, network and information security are becoming harder to control and manage.

The current environment presents challenges in taming the cloud, using new security technologies effectively, managing people and making security fit organisational workflow. In our rapidly evolving and global work environment, a practical approach to security is required and this means we need informed, knowledgeable and proactive leaders in security management.

This sharing will benefit those who are interested in Information Technology (Computer Security & Network Administration and Design) and Security Management.

Keynote Speaker

Dr Patricia A H Williams
Senior Lecturer
School of Computer and Security Science
Edith Cowan University

Dr Williams is a key researcher in the 'secau' - Security Research Centre. She has a PhD and is internationally recognised for her expertise in Medical Information Security. She has over 25 years in the medical health computing arena with 15 years industry experience in General Practice and Pharmacy computing prior to joining academia in 2001. Dr Williams is co-author of the Royal Australian College of General Practitioners Security Standards and adviser to the General Practice Data Governance Council. With over 60 publications on medical information security, she is currently representing Standards Australia at International Standards Organisation (ISO) and HL7 meetings.
